

Streamlining laboratory workflow with Arcos and ArcosSL systems

The First Bethune Hospital of Jilin University

Wang Yu
(王渝)

Technician leader of the pathology lab
in the Gastroenterology Department,
The First Bethune Hospital
of Jilin University

“To streamline our lab workflows and overcome the existing problems for tissue sample management, we introduced the EpreDia™ Arcos™ and ArcosSL™ systems in 2019 as the first user in China. Since then, we have witnessed a profound revolution to our laboratory.

This automatic and traceable system has not only secured the precious and large amount of blocks and slides in our lab, but also alleviated our workload of archiving by approximately 70%, which liberates us from the repetitive tasks we were used to and frees up more time for our individual and organizational development.

Meanwhile, the system is quite user friendly and easy to learn for our technicians. We all like it!”

“...we have witnessed a profound revolution to our laboratory.”
